

Custom Routing

In the sign making industry, it is imperative that you are versatile and fast. In the course of a single day you may be cutting aluminum, plastic, wood, solid surface material and/or vinyl. The jobs may vary from a complex 3 dimensional engraving, to cut out plastic letters to making a vinyl face. Our AXYZ CNC router handles them all.

The best file type to send your artwork over is an .eps. It can be read by most vector graphics programs (Gerber, Illustrator, CorelDraw, etc.)

For your next custom cut job trust Zumar to provide you with the finest quality the industry has to offer.

- Poly-Vinyl Stencils
- Aluminum Stencils
